

UltraSpring™ Torsion spring

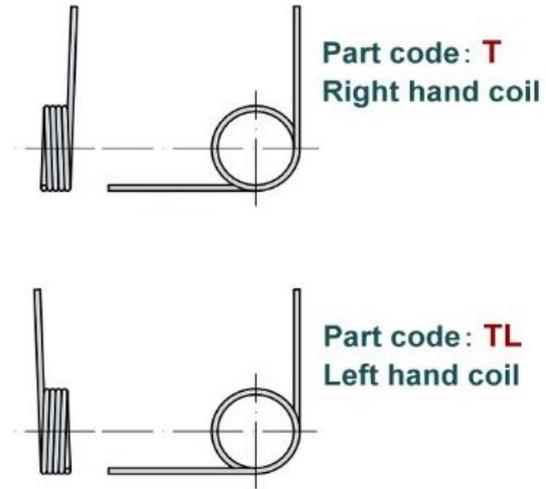

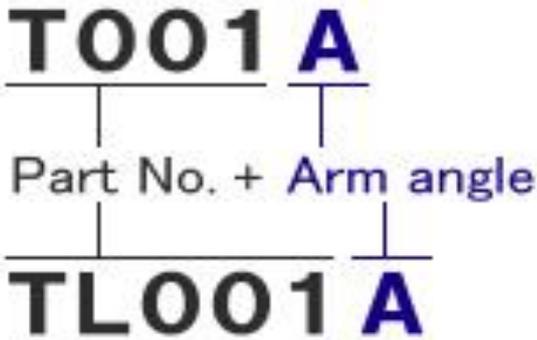

ウルトラスプリング・トーションばね

Material : SUS304-WPB

The arm's angle has 3 degrees as A (90°) B (135°) and C (180°)
アーム角度はA,B,Cの3種類あります。

Please specify Part No. and Direction of helix and Arm degree.
製品番号とコイル巻方向とアーム角度を指定してください。

The usage where deflect direction follows coil winding direction is recommended.

トーションばねの使用は、ばねを巻き込むように使うのが正しい方向です。

Generally, diameter of inner guide shaft (mandrel) shall be 90% of diameter where maximum load works because inner coil diameter decreases when torsion springs deflect.

ばねを巻き込む方向にねじるとコイル径が減少するため、案内棒（ばねの倒れ止め棒）は最大負荷時の約90%に取るのが一般的です。

The spring rate shown in the table is determined as loading at the half point of arm and having 135 degrees of free angle. The allowable deflection angle is determined by allowable static stress.

この規格のばね定数は、アーム長1/2、自由角度B (135°) で計算し、許容変位量は静荷重の応力を前提にしてあります。

The spring rate can be reference values, for the load of torsion springs are influenced by the other mating parts.

トーションばねは相手部材により荷重が異なるため、ばね定数は参考値としてください。

$$kTd = \frac{Ed^4}{3667Dn + 389(a_1 + a_2)}$$

Basic formulas for torsion springs

トーションばねの基本計算式

$$\sigma = \frac{Ed\phi d}{360Dn}$$

d: Wire diameter (線径) D: Mean coil diameter (中心径) n: Number of coils (巻数)

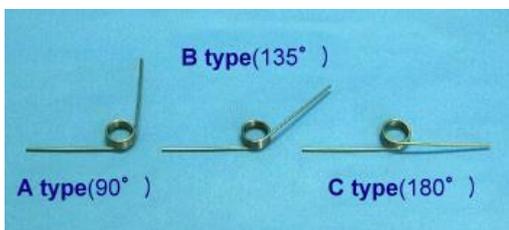

a: Arm length (アーム長) σ : Bending stress (曲げ応力) kTd: Spring rate (ばね定数)

E: Young's modulus [SUS 186 × 10³ N/mm²] (縦弾性係数) ϕd : Angle [deg] (角度)
